

# Windows/Ubuntu Dual Boot Incorrect Time

<https://itsfoss.com/wrong-time-dual-boot/#:~:text=Method%201%3A%20Make%20your%20OS%20set%20time%20and%20date%20automatically&text=To%20make%20your%20Ubuntu%20Linux,Time%20and%20enable%20both%20options.&text=You%20should%20do%20a%20similar%20settings%20change%20for%20Windows%20as%20well.>

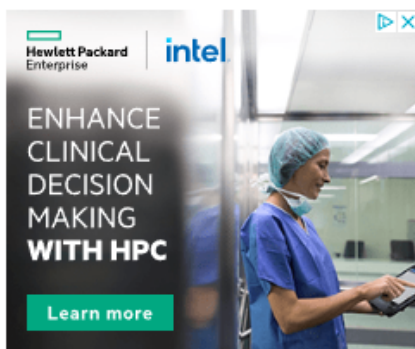

## Method 1: Make your OS set time and date automatically

What happens in this case is that though your operating system (be it Windows or Linux) will show the incorrect time for a minute, and then it automatically sets the correct time if you are connected to the internet.

To make your Ubuntu Linux system check for date and time automatically, go to System Settings -> Date & Time and enable both options.

*set auto time, date timezone in Ubuntu*

You should do a similar settings change for Windows as well.
